

Surabhi Chavan

San Diego, CA | (619) 666-2309 | surabhichavan2512@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

Software Engineer with a deep commitment to ownership, specializing in architecting cloud-native web applications and agentic AI systems. Driven to invent and simplify complex engineering challenges by developing clean front-end architectures, streamlining distributed backend infrastructure, and scaling edge-computed automation tools.

EXPERIENCE

Software Engineer | Donald Hans | Los Angeles, CA | Jan 2026 - Present

- Optimized edge computing performance to achieve sub-100ms latency by developing an AI assistant using Cloudflare Workers.
- Automated crypto trading workflows for 6 concurrent streams by architecting a Node.js Agentic AI system via CoT reasoning.
- Enhanced front-end architecture and Core Web Vitals, reducing page load times 30% by refactoring asset-rendering logic.
- Boosted end-to-end task completion 35% by scaling production AI capabilities through custom TypeScript MCP server tools.
- Accelerated CI/CD feature deployment cycles while reducing environment regression by engineering Dockerized workflows.
- Improved software engineering code quality and application scalability by refactoring modular UI components in React.

Software Engineer | JSat Automation Inc. | Blue Bell, PA | Sep 2022 - Aug 2024

- Reduced API errors 20% by implementing strict input validation across full-stack REST and GraphQL endpoints in Angular.
- Unified user experience across 2 core products by architecting an end-to-end E-workflow platform delivering 40+ features.
- Cut application latency 35% and accelerated PostgreSQL queries 45% by engineering asynchronous RxJS pipelines and indexes.
- Boosted velocity 40% by deploying Dockerized microservices on AWS Lambda and building Kubernetes CI/CD pipelines.
- Strengthened enterprise security 40% by engineering decoupled, event-driven architectures with AWS Lambda & API Gateway.
- Slashed production bugs 30% and enhanced system reliability by achieving 90% Jest testing coverage and centralized logging.

Software Engineer Intern | Qualys | India | Mar 2022 - Aug 2022

- Improved vulnerability detection accuracy 40% by architecting an automated CVE-to-CPE engine via Java and Spring Boot APIs.
- Decreased rework cycles 25% by engineering a reusable Figma design system to streamline end-to-end full-stack engineering.
- Saved 8+ analyst hours weekly by developing a cross-platform Java & Python data suite to automate repository comparisons.
- Accelerated stakeholder reporting cycles by engineering automated scripts to generate comprehensive CSV gap risk reports.
- Built automation using the Shodan API to identify affected hosts and IPs, strengthening external attack surface monitoring.
- Expedited threat identification across networks by automating live IP tracking using backend scripts and external APIs.

PROJECTS

[AgentCanvas](#) | LangChain, React, OpenAI GPT-4.1 API, CopilotKit/AG-UI Protocol, FastAPI

- Engineered LLM-powered agents using OpenAI APIs, LangChain, and LangGraph with prompt engineering via SSE protocol.
- Implemented controlled, declarative, and open-ended generative UI patterns with shared state sync between agent & React.
- Developed backend tools with LangGraph Command updates and frontend tools via useFrontendTool for bidirectional control.

[Bug Tracker](#) | TypeScript, Node.js, Express, JWT Auth, RESTful API

- Sustained 99.5% uptime for 5K+ monthly requests by building a secure bug tracker with TypeScript, Node.js, and Express.
- Enforced robust system security by implementing role-based access control, JWT authentication, & idempotent PUT updates.
- Optimized API query performance by engineering secure multipart file uploads, data pagination, and response expansion.

EDUCATION

Master of Science in Information Systems | San Diego State University | Aug 2024 - May 2026

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript (ES6+), Python, Java, SQL (PostgreSQL), HTML5, CSS3/SASS

AI & Machine Learning: Agentic AI, Model Context Protocol (MCP), RAG Pipelines, LLM Orchestration, XGBoost

Frontend Architecture: React, Angular, Next.js, RxJS, shadcn/ui, Core Web Vitals Optimization, Figma

Backend & System Design: Node.js, Express, Spring Boot, RESTful APIs, GraphQL, Event-Driven Architecture

Databases: PostgreSQL (Relational), High-Performance Databases, Query Optimization, Indexing, Connection Pooling

Cloud & DevOps: AWS (Lambda, SageMaker, API Gateway, CloudWatch), Cloudflare Workers, Docker, Kubernetes, CI/CD

Observability & Testing: Jest, Karma, Monitoring & Observability, RBAC, JWT Authentication, Centralized Logging
